

Aquastrip® 105

Aquastrip 105 is an acidic liquid concentrate, which is used to replenish the depleted acid components of Aquastrip ACB working baths.

Features & Benefits

Lowers bath pH	Extends bath-life
Can be used as a liquid concentrate	Reduces export cost

Typical Applications

- Replenishes acid components of an Aquastrip ACB working bath.

Operating Conditions

Concentration	Determined by titration
Agitation	Recommended

Titration Method

1. Pipette 2 mL of bath sample into a 250 mL Erlenmeyer flask.
2. Add 75 to 100 mL of DI water to the flask.
3. Add 5 to 10 drops of Phenolphthalein indicator and mix well.
4. Titrate with 0.1 N Sodium Hydroxide to a pink endpoint.
5. Record mL used.

Calculation

$$\text{Aquastrip ACB Acid Strength Percentage} = (\text{mL } 0.1 \text{ N NaOH} / 18.0) \times 100$$

Note – If a pH meter is available, it is preferable to titrate the sample to a pH endpoint of 8.3, because dark paints can cause problems seeing a phenolphthalein endpoint.

Use the formula below to calculate the amount of Aquastrip 105 required to replenish the Aquastrip ACB working bath.

Calculation

$$[(100 - \text{Aquastrip ACB Acid Strength Percentage}) \times 0.387] / 100 \times \text{Tank Volume}$$
